

AUST LIGHT TOWER

www.austlighttower.com.au

A revolutionary solution for large area illumination

- Simple and rapid deployment by one person in under 1 minute
- Proven performer in the harshest of conditions
- Able to operate independent of infrastructure
- Easily transported in the boot of a car
- Unprecedented lighting coverage of up to 10,000m²

The Light Tower is a unique and practical product designed to deliver rapid, reliable and cost effective lighting for industry, law enforcement, emergency services and a variety of other users.

The Light Tower is simple and robust, easily deployable (under 60 seconds) and can operate from mains power or through its inbuilt generator.

Unlike conventional lighting towers that require towing or complex framework and are an operational distraction, the easily deployable Light Tower allows you to rapidly solve your lighting problems and get on with the job at hand.

The Light Tower has been tried and tested globally under the harshest of conditions and performed flawlessly.

Disaster and emergency response, night construction, mining and law enforcement are just some of the situations Light Towers have excelled in.

A single Light Tower can illuminate 10,000m², is cheaper than conventional lighting sources and is simpler to set up and operate, so why use anything else for your projects?

Make the Light Tower standard operating equipment for your business and never be caught out in the dark again.

TECHNICAL INFORMATION

- Australian Standards Approved AS/NZS CISPR 5:2006
- Adjustable Tower height from 3-5 metres

- Department of Defence (RAAF)
- State Emergency Service (SES)
- Rural Fire Service (RFS)
- Civil Airports
- Fire Services
- Government Emergency Services
- Roads and Traffic Authority (RTA)
- ERGON energy
- Law Enforcement
- Local Councils
- Hire companies
- and Others

Testimonials:

"Gosford SES purchased the light tower and have been impressed by its versatility and functionality. We have used it during training and have found it to be excellent during roof operations and outdoor night events. The light is softer light, unlike the harsh flood lights and this enables our operators to retain their night vision. The florescent type light emitting from the work site greatly reduces the shadow that normally accompanies flood lights. The light produces minimal heat and packs up very quickly. It is easily carried by one person (we purchased the unit without the Generator). Our members believe that this light will be very useful during any job that requires light from above, especially roof jobs and tree jobs".

Rolf Garda

Gosford SES Controller.
